Yes No *If yes, what type?:*

BCC SCC MELANOMA

OTHER (give details)

During your Comprehensive Skin Cancer Check your doctor:

- will review the information you provide and discuss your skin history
- will use an advanced dermatoscope (specialised skin microscope) to examine moles, freckles, lesions or bumps on your head, face, neck, torso, legs, feet, arms, and hands
- may record some of them digitally in your chart for future review
- will provide recommendations for treatment (if required), frequency of future checks, and provide you with educational materials

MOLE COUNT

Number of moles when you were 18 years of age.

Click on the diagram below that best describes you.

Moles are small brown or black spots on the skin, either raised or flat. Moles usually develop before age 20. Unlike freckles, moles do not change in appearance after sun exposure.

None

Few

Some

Many

Are you concerned about any mole or spot?

Yes No

Have you noticed any new or changing moles?

Yes No

Do any of your moles get itchy or bleed?

Yes No

If you have answered yes to any of the last three questions, please mark on the diagrams where these spots/moles are and any details about them.

PATIENT CONSENT

- I understand the Comprehensive Skin Examination process is labour intensive and there may be a nurse or other assistant present throughout the screening process.
- I have been informed to my satisfaction about the process of a Comprehensive Skin Examination and I am aware that the use of clinical photography may be warranted in the management of skin lesions detected.
- I understand the clinical photography taken during this examination will be used for diagnostic and treatment purposes and deidentified clinical photographs may be used for ethical research/educational purposes.
- I accept that a Comprehensive Skin Examination and clinical photography are aids to the diagnosis of skin lesions and may not have 100% clinical accuracy.
- I am aware that if I do not disclose skin lesions or areas of concern that are concealed by my underwear that I will accept full responsibility for any clinical outcome that not disclosing or allowing examination of these areas may lead to.
- I am aware that I am able to bring a chaperone to my Skin check.
- I consent to the clinicians and staff performing a full skin examination and the use of clinical photography, as described above, during this examination.

What happens if the Doctor finds a suspicious lesion?

- Your Doctor will let you know if they have found concerns.
- They will explain your options, recommend a treatment plan and discuss costs which vary depending on the issue.
- Simple treatments (cryotherapy or a simple biopsy) may be done at your Skin Check, time and financial consent permitting.
- More complex procedures are booked into a surgical clinic so that appropriate resources and nursing support is available. Common treatment options:
 - Cryotherapy
 - Biopsy / Shave
 - Curettage
 - Excisions
 - Non-Surgical Treatments
